CLAIMS:

1. An electronic mall system comprising: storage means for registering execution applications of a plurality of application service providers:

means for settling the utilization charge for each user corresponding to the amount of utilization of each application and the application service charge acquired by each application service provider;

means for generating, in said application service provider registration storage means, application service provider registration information in response to an application registration request which may be received from any application service provider; and

means for executing a plurality of applications of a plurality of different application service providers.

An electronic mall system according to Claim
 , wherein said means for generating the application
 service provider registration information includes:

means for generating, in said application service provider registration storage means, the application service provider registration information for the electronic mall system, based on the applications for registration filed by a plurality of the application service providers;

means for adding a new application to said

application service provider registration storage means;

means for deleting an application from said application service provider registration storage means: and

means for updating a previous application for the electronic mall system based on the data of the application updated at the time of version-up of a registered application.

3. An electronic mall system according to Claim 1, wherein said means for executing the applications of a plurality of different application service providers includes:

means for calling an application from said application service provider registration storage means and converting an executable application into an icon;

means for generating an execution screen in response to an instruction to execute the application selected through the icon; and

means for taking a log of the start time and the end time of the execution of an application.

4. An electronic mall system according to Claim
1, further comprising means for executing an
application in bench mark mode, and bench mark means
for preventing the utilization charge from being levied
for an application executed for not longer than a
predetermined time by the user desirous of checking the
performance of said application.

An electronic mall system according to Claim

wherein said settlement means levies the total amount of the application utilization charge for each application user and the application service charge acquired for each user by a plurality of the application service providers,

said total amount of the application
utilization charge for each user being calculated based
on the utilization charge information of said
application service provider registration storage means
and the information on the utilization start time and
the utilization end time of said application generated
by the application execution function,

said application service charge being calculated based on the amount of the application utilized for each of said application service providers.

6. A method for executing applications of an electronic mall, comprising the steps of:

settling an utilization charge for each user corresponding to the amount of utilization of each application and the application service charge acquired by each application service provider;

storing the application service provider registration information in storage means in response to a request, if any, for application registration from an application service provider; and

executing applications of a plurality of different application service providers.

7. A computer-readable storage medium for executing applications of an electronic mall, comprising the functions of:

settling an utilization charge for each user corresponding to the amount of utilization of each application and the application service charge acquired by each application service provider;

storing the application service provider registration information in storage means in response to a request, if any, for application registration from an application service provider; and

executing applications of a plurality of different application service providers.

 An electronic mall system linked with a plurality of application service providers, comprising:

an electronic mall including storage means for registering the execution applications of a plurality of application service providers, means for settling the utilization charge of each user corresponding to the amount of utilization of each application and the application service charge acquired by each application service provider, means for generating the application service provider registration information in said storage means in response to an application registration request, if any, from said application service provider, and means

for executing the applications of a plurality of different application service providers;

at least a user terminal processing unit for requesting said electronic mall to process an application; and

a plurality of application service provider units connected to said electronic mall through a network.
